40 (a) Crude lung membrane preparation

Male Hartly strain guinea pigs were sacrificed by decapitation. The trachea and lung were removed and homogenized buffer (0.25 M sucrose, 10 mM Tris-HCl pH 7.5, 0.1 mM EDTA) by using Polytron (Kinematica). The homogenate was centrifuged (1000 xg, 10 min) to remove tissue clumps and the supernatant was centrifuged (14000 xg, 20 min) to yield pellets. The pellets were resuspended in buffer (5 mM Tris-HCl pH 7.5), homogenized with a teflon homogenizer and centrifuged (14000 xg, 20 min) to yield pellets which were referred to as crude membrane fractions. The obtained pellets were stored at -70°C until use.

In binding assays, ³H-Leukotriene D₄ (0.3 nM) and drug were incubated with 100 µl of the membrane preparation in Medium 1 at 25°C for 30 minutes in a final volume of 500 µl. Separation of receptor-bound from free ³H-Leukotriene D₄ is achieved by immediate filtration through Whatman GF/B filters under vacuum and washed three times with 5 ml of ice-cold buffer (10 mM Tris-HCl pH 7.5). Non-specific binding was defined as binding 55 in the presence of 1 µM Leukotriene D₄. Preparation 1

A mixture of 2-bromomethyl-4-tert-butylthiazole (3.4 g), 2-hydroxy-5-methoxybenzaldehyde (2.21 g) and potassium carbonate (2.0 g) in acetone (25 ml) was stirred under reflux for 7 hours. After being filtered, the filtrate was concentrated under reduced pressure to give a crude residue. The residue was subjected to column chromatography on silica gel and eluted with a mixture of toluene and ethyl acetate. The fractions containing object compound were combined and concentrated under reduced pressure to give a syrup. The syrup was crystallized from n-hexane and filtered to give 4-tert-butyl-2-(2-formyl-4-methoxyphenoxy)methylthiazole (3.23 g).

55 To a cooled solution of 4-tert-butyl 2-(5-hydroxybenzofuran-2-yl)thiazole (0.33 g) in N,N-dimethylformamide (5 ml), sodium hydride ((60% in mineral oil) 55 mg) was added below 10°C. After being stirred for 10 minutes, 3-bromomethylbenzonitrile (0.26 g) was added to the mixture. After being stirred at ambient temperature for 2 hours, the resulting mixture was poured into ice-water and extracted with ethyl acetate. The organic layer was washed with brine, dried over magnesium sulfate, and concentrated under reduced pressure to give a syrup. The syrup was crystallized with diisopropyl ether and filtered to give crystals of 4-tert-butyl-2-[5-(3-

cyanophenylmethoxy)benzofuran-2-yl]thiazole (0.38 g).

Example 12

50 A mixture of 4-tert-butyl-2-[5-(2-cyanomethylphenylmethoxy)benzofuran-2-yl]thiazole (0.40 g), sodium azide (0.58 g) and ammonium chloride (0.66 g) in N,N-dimethylformamide (4 ml) was stirred at 110°C for 8 hours. After being cooled, the mixture was poured into ice-water and extracted with ethyl acetate. The organic layer was washed with brine, dried over magnesium sulfate and concentrated in reduced pressure to give a syrup. The syrup was subjected to column chromatography on silica gel and eluted with chloroform, suc-

55 cessively with a mixture of chloroform and methanol (10:1). The fractions containing object compound were combined and concentrated under reduced pressure to give 5-{2-[2-(4-tert-butylthiazol-2-yl)]benzofuran-5-yloxymethyl]phenylmethyl}-1H-tetrazole (0.21 g).
